

## Specification text for applications involving monitoring of railway tracks

Item      Description of works

Prior to fixing adapter RSAK80, the tracks have to be cleaned at the intended fixing places. Number the adapters and then attach them with mounting adhesive or 'Flexkleber' adhesive at about 3 m intervals. The zero measurement can be carried out on the following day. For free positioning, also attach adapters **RSAK80g** to adjoining masts and measure their positions.

Any further control measurements to be agreed with the site management or authority in charge. Important: During the tamping process and through to the end of construction works, the tamping machine should be adjusted such that the tracks opposite adapter RSAK80 are recorded.

Adapters with survey markers by Messrs. Rothbucher Systems, Bayerisch Gmain, Tel.: +49 (0)8651/2749 Fax: +49 (0)8651/3090, including fitting.

We recommend article no. **RSAK80** in red or grey.
